Class 1: Function experimentally demonstrated in P. aeruginosa.

Class 2: Function of highly similar gene experimentally
demonstrated in another organism (and gene context consistent
in terms of pathways its involved in, if known).

Class 3: Function proposed based on presence of conserved amino
acid motif, structural feature or limited sequence similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Direct Submission

PseudoCAP is coordinated by Fiona S.L. Brinkman (Simon Fraser University, Canada) and Robert E.W. Hancock (University of British Columbia, Canada). We welcome submission through www.pseudomonas.com of any proposed changes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pseudomonas aeruginosa PAO1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1: Function experimentally demonstrated in P. aeruginosa.
2: Function of highly similar gene experimentally demonstrated in another organism (and gene context consistent in terms of pathways its involved in, if known).
3: Function proposed based on presence of conserved amino acid motif, structural feature or limited sequence similarity
                                                                                                                                                                                                                                                                                                                                                                                                 to an experimentally studied gene.
4: Homologs of previously reported genes of unknown function, or no similarity to any previously reported sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              On Mar 21, 2004 this sequence version replaced gi:28604232.

This sequence was finished as follows unless otherwise noted: all regions were either double-estranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. This BAC clone was sequenced to phase II by the National Research Centre on Plant Biotechnology, Indian Agricultural Research Institute, New Delhi and was completed to phase III by the Cold Spring Harbor Laboratory Genome Center under the Indo-US collaboration. Clone OSJNBa0041J17 overlaps clone OSJNBa0007D07 from base 10381 to base 148829. The overlap is from base 1 to base 48448 on OSJNBa007D07.

This BAC clone was sequenced to phase II by the National Research Centre on Plant Biotechnology, Indian Agricultural Research Institute, New Delhi and was completed to phase II by the Cold Spring Harbor Laboratory Genome Center under the Indo-US collaboration. Clone OSJNBa001J17 overlaps clone OSJNBa0007D07 from base 100381 to base 148829. The overlaps from base 1 to base 48448 on OSJNBa0007D07.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ghazi, I.A., Yadav, M., Dixit, R., Singh, A., Srivastava, S.K., Pal, A.K., Dalal, V., Batra, K., *McCombie, W.R., *Spiegel, L., *de la Bastide, M., *Zutavern, T., *Muller, S., *Nascimento, L., *Balija, V., *Bell, M., *Miller, B., *Katzenberger, F., *Nascimento, L., *Dike, S., *Pellmer, L., Gaikwad, K., Sharma, T.R., *O'Shaughnessy, A., *Palmer, L., Gaikwad, K., Sharma, T.R., Mohapatra, T. and Singh, N.K.
Oryza sativa (japonica cultivar-group) chromosome 11 BAC clone OSJNBa0041J17, complete sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4 (bases 1 to 148829)
